**Application Name:** WeFit!

**Application Description:**

An app/website for Athletic teams to keep track of practices, weight room sessions, PRs, and workouts provided by a strength and conditioning coach. This would include but not limited to: a calendar with the ability to add events, a leaderboard, and a personal record for athletics to track their workouts and PRs, and scheduling, Coach and athlete account verification.

**Vision Statement:**

“For athletes who demand the best solution for tracking their personal performance. WeFit! Is the performance tracking app that allows coaches and athletes to interact and compete in a simple and efficient way. Unlike other fitness trackers, WeFit allows users to not only interact with each other but it allows coaches to push workout schedules and track the team’s performance both individually and as a team.”

**Development Methodology:**

Agile methodology is how we plan to develop throughout this project. We will also be using our github board to update our epics and user stories.

**Communication Plan:**

We plan to communicate over Discord. We might meet up in person sometimes but most of our communication will be happening over Discord online(remote).

**Meeting Plan:**

Online:

**Ta Meeting:** 4:15 Monday Online

**Use Case Diagram:**
